![moio.care - mobile intelligent observers]

Take care into the 21st century with MOIO

Our company, MOIO GmbH is based on many joint research projects and was founded in 2017. Together with our partners, we develop practice-oriented innovative solutions for the healthcare market. Our first product is the moio.care system. The digital care assistant supports numerous challenges in inpatient, outpatient and home care.

For our office in Fürth we are offering a full-time position as

Development Engineer (m/f/d) – Embedded systems / firmware

Your tasks

- Develop new features for the moio.care sensor module
- Analyse and fix defects within the moio.care sensor module firmware
- Refactor the firmware for the mobile communication with the moio servers
- Refactor the firmware update "Over the Air"
- Enhance the PCB of the moio.care sensor module

Your profile

- Completed university degree in computer science or comparable field of study
- Several years of experience with complex firmware source code (more than 8,000 lines of code) and collaboration in a multidisciplinary development team
- Application-oriented programming experience in C and for ARM Cortex-M STM32
- Experience in IoT-communication via mobile networks
- Knowledge of GSM Modulen from SIM.com, circuit design/layout and soldering an advantage
- Relevant professional practice in the area of embedded software development and ideally in medical technology
- Strong communication skills in German and/or English

Why MOIO?

- Make an impact and unfold many opportunities to actively shape and develop our organisation
- Attractive working environment, flexible working hours, working from home, permanent employment and much more
